

EURO ENGINEERING

BUILT TO HOLD THEIR **GROUND**.

COMPANY PROFILE

ABOUT US

Everything began with hands-on craftsmanship, refined over more than twenty years, and grew into Euro Engineering: a company that has brought the precision of manual work into the language of industrial engineering, never losing direct contact with those who design and those who build.

We don't design standard equipment to adapt to the customer: we listen to the process, understand its specific needs, and build the solution around them. Every reactor, every filter, every plant that leaves our facilities is designed to measure for the application it is intended for — from the feasibility study through to final testing.

It is a method that accompanies us from design to on-site construction, from day-to-day technical support to delivering a turnkey plant: a single journey, followed closely at every stage, that allows us to guarantee consistency, quality, and accountability.

CUSTOM-BUILT UNITS DELIVERED

WHAT SETS US APART

Tailor-made design

Every piece of equipment is born from the customer's process, not from a catalogue: the specification drives the design, not the other way around.

Integrated delivery

Design, construction, and support are handled as one continuous process: fewer handoffs, more control, less margin for error.

Long-term continuity

We don't deliver a machine and walk away: we stay by the customer's side even after the plant is up and running.

SERVICES

- Feasibility studies
- Budget definition consulting
- Custom design to specification
- Facility layout design
- Plant engineering and installation
- Structural design
- Process consulting
- After-sales support and testing

PRODUCTS AND SOLUTIONS

We design and build the full range of equipment for the process industry, each one calibrated to the customer's specifications in terms of materials, capacity, and operating conditions.

Reactors

Plate filters

Sparkler filters

Plate filter presses

Distillation columns

Heat exchangers

CIP systems

Tanks

Nutsche filters

Buchner filters

Mixers

Dryers

Kilo-LAB

Skid
